Wildlife of Antigua & Barbuda's Offshore Islands

Presented by the Environmental Awareness Group

2012 Calendar

Silver Spotted Flameless (Glyptoternis sticticalis)
The Silver Spotted Flameless or Gold trolley can be found throughout the Caribbean, Central America, South America and in the Southern half of the USA. They feed on orange caterpillars that are born in colonies. They pick up the toxins from their food plants. The orange colour serves as a warning to would be predators.

Sea Turtle (Chelonia mydas)
It is the most common of our endangered sea turtle species found in Antigua and Barbuda. Its breeding sites tend to stay concentrated near the ocean floor. Unfortunately for now what many fishermen who have hunted these turtles for hundreds of years to make money. The heaviest hunting season runs from June to November. Females need 4-5 times, on average, each season, laying up to 1 time. Only one out of every 1,000 hatchlings will survive to reproduce.

Queen Conch (Strombus gigas)
The Queen Conch is prized for its succulent shell and a strong, pinkish interior. It is also hunted for its distinctive shell which can be prepared in a variety of ways and is a popular delicacy. It is also hunted for its distinctive shell which can be prepared in a variety of ways and is a popular delicacy. This marine delicacy is under severe threat on stocks are being severely depleted due to overfishing and poaching.
